

TARIFF POLICY AND REGULATION

Current situation: 2 mini-grids projects (Vale da Costa e Monte Trigo) with renewable energy (wind and solar). Public and private management. Non regulated tariffs.

Proposal not yet adopted:

- Final tariff must be equal to the national tariff;
- In case that the revenues collected by the microgrid operators don't cover the production costs, a cross-subsidy will be applied to the national tariff;
- a pre-payment meter will be installed in the microgrids.
